It has a role as a physiological molecule for limiting vascular smooth muscle cell proliferation and migration after arterial injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                      31.7%;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         #authors
                                                                                                                                                                                                                                                                             ##experimental_source polymorphonuclear leukocytes
This protein, found in a variety of body fluids, complexes with
metalloproteinases, irreversibly inactivating them. It also
mediates erythropoiesis in vitro; but, unlike II-3, it is
species-specific, stimulating the growth and differentiation
only human and murine erythroid progenitors.
The remarkable heat stability of this protein may be due to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ##molecule_type protein

Statistics: Mean 43.550; Variance 66.095; scale 0.659

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch_pp no on: protein - protein database search, using Smith-Waterman algorithm Mon May 4 14:49:45 1998; MasPar time 9.58 Seconds 575.950 Million cell updates/sec

Description:
Perfect Score:
Sequence: >R07955 (1-220) from a-geneseq.pep 1643

Jular output not generated.

l mgaaartlrlalgllllatl.....cawyrgaappkqefldiedp 220

Scoring table: PAM 150 Gap 11

Searched: 69112 seqs, 25083644 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

swiss-prot35 1:swiss1

Database:

Statistics: Mean 44.629; Variance 66.231; scale 0.674

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SPECIFIC ACUTE RESPONSE TO REMODELLING STIMULI.

SPECIFIC ACUTE RESPONSE TO REMODELLING SCIMULI.

-i- SUBCELLULAR LOCATION: EXTRACELLULAR MATRIX.

-i- SUBCELLULAR LOCATION: EXTRACELLULAR MACULAR DISCORDER WITH DYSTROPHY (SPD), A RARE AUTOSOMAL DOMINANT MACULARIZATION AND ATROPHY OF CENTRAL VISION FROM SUBRETINAL INCOVASCULARIZATION AND ATROPHY OF CENTRAL VISION FROM SUBRETINAL INCOVASCULARIZATION AND ATROPHY OF CENTRAL VISION FROM SUBRETINAL MACULAR DISCIFORM DEGENERATION OF THE OCCULAR TISCUES. GENERALLY, MACULAR DISCIFORM DEGENERATION DEVELOPS IN THE PATIENTS EYE WITHIN 6 MONTHS TO 6 YEARS.
